# PREPARING YOUR SITE FOR SUCCESS!

## ABOUT ROGERS GROUP

Rogers Group Inc. is the largest privately owned construction aggregate, crushed stone, sand and gravel company in the United States. Since 1908, our construction aggregates and hot mix asphalt have been the foundation for homes, schools, hospitals, highways, and other infrastructure critical to the American economy. As of August 2020, we are proud to expand our services in the Upper Cumberland region to include excavation and grading, erosion control, underground utilities and other similar service to become a turnkey site preparation contractor.

Rogers Group's core values are placing the highest value on people, unwavering integrity, and excellence in every undertaking. Everything we do, from how we treat our customers to our standards on site, reflects one of those values.

For more information about Rogers Group, visit [RogersGroupInc.com](http://RogersGroupInc.com).

## COMMITTED TO THE COMMUNITY

Rogers Group is deeply invested in the Upper Cumberland community. We've been a major sponsor of Red, White and Boom Fourth of July Celebrations and Christmas in the Park in Cookeville. In addition to supporting Project Graduation for high schools across the Upper Cumberland region, over the years, several Rogers Group employees have held a variety of leadership positions in community organizations including the Highlands Economic Partnership, and several area chambers of commerce.

# OUR SERVICES

## GRADING & EXCAVATION

Whether your project consists of a simple building pad construction or a complex parking area or foundation system, Rogers Group can perform all of your grading and excavating needs. With an experienced staff of equipment operators and laborers, we can stage a safe, multifaceted excavation, even under the most difficult of circumstances.

Regardless of the size or the complexity of a project, our attention to detail and focus on customer service will prove Rogers Group to be a reliable partner.

## CLEARING & DEMOLITION

Rogers Group employees have the “know how” and skill for projects requiring demolition and removal of existing structures and debris. This helps us be the full-service site work contractor you need us to be.

Prior to demolition, our team members can identify salvageable items (scrap metal, beams, etc.) within an old structure that will help keep that price low.

## EROSION CONTROL

Storm water management programs and planning are a priority on every project. Our experience and attention to detail protect watersheds adjacent to our projects and ensure the projects align with federal and local regulations. Erosion and sedimentation controls are the first item addressed on-site and the last to be removed. Throughout the various phases of the project, Rogers Group employees closely monitor these controls to give our customers peace of mind.

## UNDERGROUND UTILITIES

Any contractor can put a stick of pipe in the ground, but after that pipe is covered and out of sight, it must withstand the test of time. In order to withstand that test, underground utilities must be installed with laser precision accuracy. Rogers Group’s crews work with that level of precision in mind, and they have experience ranging from open field pipe installation to complex urban reconstruction projects.

## CRUSHED STONE, ASPHALT, PAVING & FILL DIRT

Rogers Group has an established reputation in the Upper Cumberland area as the premiere provider of crushed limestone and hot-mix asphalt. We operate six asphalt plants in the area, and our quarry locations include Algood, Allons, Cookeville, Gainesboro, Livingston, Monterey and Sparta. We have been involved in the construction of the newest Cookeville Interchange along I-40, the Tennessee Avenue connection to Hwy 70, and the Academy Sports Distribution Center.

Providing our own stone and asphalt for a project makes us vertically integrated, limiting project interruptions and ensuring the quality of the finished project from the moment we break ground.

In addition to rocks and roads, Rogers Group also sells top quality, clean fill dirt and topsoil by the scoop or by the truckload and can be picked up or delivered to your location.
